Budi Aji, Siti Masfiah, Siwi Pramata Mars Wijayanti, Dian Anandari, Chalernpol Chamchan:

We have reached a decision regarding your submission to Jurnal Ilmu Kesehatan Masyarakat, "MENTAL HEALTH STATUS AND ITS DETERMINANTS AMONG OLDER PEOPLE IN RURAL INDONESIA".

Our decision is: Revisions Required

Reviewer A:

Recommendation: Revisions Required

Category

- Original Scientific Paper

Is the title clear and is it adequate to the purpose of the study

No

Abstract clearly presents objects, methods and results

Yes

Scientific methods are adequately used

No

Terminology is adequate

Yes

Paper does not have excesses and shortening is not necessary

Yes

Results are clearly presented

No

Conclusions are logically derived from the data presented

Yes

Keywords are adequate

Yes

Supplements (tables, charts, pictures and drawings) are necessary and clear

Yes

References are appropriate

Yes

Quality of written English - No suitable for publication unless extensively edited

No

Quality of written English - Needs some language correction before being published

Yes

Quality of written English - Acceptable

No

The decision for the article

- This manuscript will be reconsidered after major revision

Reviewer comments

1. Title is too big while the scope is a small survey not representing all village and Indonesia
2. Some Key Term is not suitable: no longer chronic diseases but not communicable diseases
3. Statistical analysis is not complete: is there any relation between earl older and elder (more than 70 years), it will better if using graph (trend).
4. Determinants: will better if use multiple regression analysis and not only bivariate analysis

Reviewer B:

No

Quality of written English - Needs some language correction before being published

Yes

Quality of written English - Acceptable

No

The decision for the article

- This manuscript will be reconsidered after minor revision

Reviewer comments

Reviewer comments:

In method already stated that: Multivariate analysis using logistic regression was employed to calculate the determinants of health problems among older people. The method used in this model was the enter model. All the variables were run together to analyze the effect on the mental health status of the elderly. But in result it hasnot showed up.

Response to Reviewer Comments

Manuscript title: Mental health status and its determinants among older people in rural area in the district of banyumas central java

Reviewer comments 1

1. Title is too big while the scope is a small survey not representing all village and Indonesia

[Authors' response:](#)

We thank the reviewer for this point. We have revised the title

2. Some Key Term is not suitable: no longer chronic diseases but not communicable diseases

[Authors' response:](#)

We thank the reviewer for this point. We have revised the term

3. Statistical analysis is not complete: is there any relation between earl older and elder (more than 70 years), it will better if using graph (trend).

[Authors' response:](#)

We thank the reviewer for this issue. From our analysis we could not find the significant association between early and elder and mental health status. Therefore, we did not focus our description for this issue.

4. Determinants: will better if use multiple regression analysis and not only bivariate analysis

[Authors' response:](#)

We thank the reviewer for this issue. We have already performed multivariate analysis using logistic regression

Reviewer comments 2

In method already stated that: Multivariate analysis using logistic regression was employed to calculate the determinants of health problems among older people. The method used in this model was the enter model. All the variables were run together to analyse the effect on the mental health status of the elderly. But in result it has not showed up.

[Authors' response:](#)

We thank the reviewer for this issue. We have revised the analysis on the method section to make appropriate with the result. In the result section, we have revised to make a clear description about the data analysis by using logistic regression with enter method approach.
