**REVIEWER'S COMMENT**

Reviewer comment to the manuscript entitled:

**Performative and economic analysis on Local Duck farming in Central Java**

**GENERAL COMMENT**

There is no synchronization between title, background, objectives, method material and conclusions  
 The general comment for this manuscript : the content of this manuscript is too simple for publishing in Q3. It will be better if there is an additional analysis to elaborate this study.  
 This manuscript is weak of concept and substancy and English as well .

**RUNNING HEAD**

Comment:

Suggestion:

No running head

Running Head should be written

**TITLE**

Comment :

Suggestion :

Please recognize between the title and content of study as the result of study in only input output ratio. What is the concept of economic analysis??? What is the defferences between economic analysis and financial analysis

Please learn the template, how to write the title

**ABSTRACT AND KEYWORDS**

Comment :

Suggestion :

**REVIEWER'S COMMENT**

|   |   |
|---|---|
| <p>Are the objectives of this research explicitly in Chapter I ?????</p> <p>There is no research method</p> <p>To be careful in developing goals related to the process or sequence in which they are answered, whichever comes first</p> <p>What is a farm budget? Budget in the context of a budget? Because this concept does not exist in Chapter III, especially the method of analysis</p> <p>There was no relation to the purpose of research and result, especially result on advocacy.</p> <p>In this abstract there are terms of profitability, net income, return and marginal profit ??? are the 4 concepts different? If so, that means it is a different research goal. please use standard terms in business analysis.</p> <p>Marginal profit, what's the difference with return? The material and method are not mentioned at all about marginal profit. The concept of input-output ratio in material and methods is physical (line 123) but the results are values. There are asynchronous abstracts, objectives, materials and method, results and conclusions</p> <p>In the abstract there is the word profitability but in the results of the study there is no calculation or description of profitability.</p> | <p>Must be corrected and adjusted between title, objective, analysis and result and also conclusion</p> |
|---|---|

**INTRODUCTION**

|   |   |
|---|---|
| <p>Comment :</p> <ul style="list-style-type: none"> <li>- In introduction, there is no explicit research objective</li> <li>- In the introduction it should be specific and why research in accordance with the title was carried out</li> <li>- Many repeated statement, for example feed cost, gives the impression that the main research on feed costs</li> <li>- The word of industry, Is it proper word to describe the duck farm? Actually, farm scale of farmer's duck is not more than 5000 each farmer or it is "peternak rakyat" → check with the research result and check as well at the line 62</li> <li>-</li> </ul> | <p>Suggestion :</p> <p>The actual introduction contains the argumentation and reason why the research as in the title is done</p> <p>Must be corrected</p> <p>Detail of comment can be seen at manuscript</p> |
|---|---|

**MATERIALS AND METHODS**

## REVIEWER'S COMMENT

|   |                        |
|---|------------------------|
| <ul style="list-style-type: none"> <li>- There is no research method, what is it???</li> <li>- What is the method to determine research location, especially regency</li> <li>- How many duck farmers population from each regency which is used as a basic for the method of taking respondents</li> <li>- How to determine the number of respondents in each regency and what metod is used?</li> <li>- This is important because if the determination of the number of respondent frmers in each regency is not right, it will effect the number of duck and production.</li> <li>- How to get 120 of farmer, what is the method ? and how to distribute that sample for each regency? Please justify it</li> <li>- More importantly, if each number of livestock is different what can be directly compared.</li> <li>- If an area has more duck then it is logic that production and reveue are also numerous. That seems to be the case in this study</li> <li>- The analysis technique only describe the production and FCR, how about the analysis to be able to answer the objective related to economic analysis???</li> <li>- There is no common thread on how the title, objectives and analytical tools are related.</li> <li>- So, what is the economis analysis??</li> <li>- Input output analysis used in the material and the method does not match the input output calculations on the results of the study</li> <li>- What the analysis to answer financial, i.e cost, revenue, income, profitability as a mention on aim of research ??????</li> </ul> | <p>Must be revised</p> |
| <b>RESULTS AND DISCUSSION</b>   |                        |
| Comment :   | Suggestion :           |

**REVIEWER'S COMMENT**

|   |                    |
|---|--------------------|
| <ul style="list-style-type: none"> <li>- Why the researcher has that the geographical and socioeconomic factors play predominant roles in cost variations among different regions of duck egg production?</li> <li>- Please check, the higher of farm scale (the number of duck) the higher the production and cost ....</li> <li>- Table 2,3 and 4</li> <li>- Please check also the comment in line 115-116</li> <li>- Is researcher measure the investment?</li> <li>- Investment is different with cost production. In this research just calculate cost production, not investment</li> <li>- Table 6 just calculate RC ratio. Return on investment (ROI) is not RC ratio .... That is different concept</li> <li>- In order to be observed on line 231 to 251 this explanation refers to which context or purpose? Because it seemed suddenly to appear</li> <li>- Line 239 → This statement is too broad. Please discuss connecting to the aim of research</li> </ul> |                    |
| <b>CONCLUSIONS</b>  |                    |
| Comment :   | Suggestion :       |
| Conclusion is the answer of research aims<br>As mention before that the explicit of research aims is not clear...<br>Please pay attention to that   | Need to be revised |
| Please check how to write the references  | Need to be revised |

**Eligibility to Publish**  
(Use ✓)

Based on the comment above, this manuscript is:

- A. eligible to publish in JITAA without revision.
- B. eligible to publish in JITAA with minor revision.
- C. eligible to publish in JITAA with major revision. → ✓
- D. No eligible to publish with reason:
  - 1. duplication of other article .....
  - 2. no suitable among the title, hypothesis and conclusions.
  - 3. weak in methodology :

4. Miscellaneous:

.....  
 .....
