Dear Professor Son Radu,
COVER LETTER FOR MANUSCRIPT SUBMISSION TO FOOD RESEARCH

I am pleased to submit an original research article entitled:
Formulation of low fat cheese analogue from sweet corn extract using papain and lime extract as coagulant

Cheese from corn extract has the advantages of low-fat and high-carotene. From this research, we get that cheese analogue has protein content of 7.3%, fat content of 4.85%, total carotene of 544.4 mg/kg, cholesterol 0.02 mg/kg, while commercial cheese from cow's milk has protein content 6.5%, fat content 24.85%, total carotene 5.30 mg/kg and cholesterol 0.18 mg/kg. Thus, sweet corn can potentially be used as a raw material for producing low-fat cheese analogues.
